

First Grade Science

The first grade science program is presented through a series of themes throughout the year. Observing, interpreting, and understanding physical and natural phenomena are part of our daily work. Your student will be introduced to the scientific method. Hands-on experiments and experiences provide concrete opportunities to make predictions and develop conclusions.

Curriculum areas include nutrition, sea life, ecology, the senses, and living things. Students will create a sea life project through a cross-discipline approach that includes French, music, art, and technology. Research takes place in the library and at home. As a culminating activity for this cross-curricular program, the students will present their work to the school and guests.

Life Science

- * Aquatic life

Earth Science

- *Weather

- *Hydrosphere

- *Geosphere

Physical Science

- *Seasons

- *Measurement
